## Pediatric Infectious Disease

Children are not just tiny adults when it comes to illness. Often the signs and symptoms they experience are different. At MSU Health Care Pediatric Infectious Disease, our team of specialists are here to figure out what is going on with your child and what is the best treatment for them. The team consists of scientists and pediatricians with special training in infectious diseases in children who provide state of the art inpatient consultations for children with various proven or suspected infectious diseases as well as conduct research.

Our physicians also provide inpatient care at both University of Michigan Health-Sparrow and McLaren Greater Lansing Hospitals. Outpatient care is provided at our MSU Health Care Specialty and Pediatrics clinic.
